FUMISURE®

Innovative Fumigation Solutions

A Good Cleaning Process Will Remove Only 80% of Disease Agents

"Cleaning and Disinfection" followed by "Effective Fumigation" = De-contamination = 100% Safety

Introducing an Innovative technology for the SAFEST fumigation especially designed **for 100% terminal disinfection.**

- **FUMISURE®** is a single use formaldehyde gas generator
- **FUMISURE®** contains paraformaldehyde in labelled form
- Paraformaldehyde is a solid polymer of Formaldehyde
- On heating, Paraformaldehyde gets depolymerised and reacts with moisture present in the air to form formaldehyde gas which decontaminates the desired area of application.

Composition

Paraformaldehyde 96%

FUMISURE® consists of two parts:

- Lower box contains wax candle for exothermic reaction.
- Upper box consists of paraformaldehyde for fumigation.

Mode of Action

Formaldehyde gas acts by protein denaturation and reacts with the amine group in the cells thereby causing lysis of the cell.

Features and Benefits

- Single use product
- Easy to opearate
- Less manpower is required

Cleaning Process

The physical removal of foreign material like dust, soil, organic material such as droppings, blood & secretions etc. which protect disease agent.

FUMIGATION PROCESS HELPS TO ACHIEVE THE REMAINING 20%

Disinfection

Disinfection might kill the remaining disease agents left after cleaning. Disinfection is the least reliable step of biosecurity and depends on many factors such as

- The quality of cleaning
- The hardness of water
- Quality and suitability of disinfectant
- Correct dilution and application

"Only disinfection and cleaning will not help to eradicate the virus, bacteria, mold etc."

FUMISURE® ensures effective fumigation i.e. 100% decontamination and assured safety to the birds and the farmers.

Directions for Use

Select the area of application and calculate the area either in Cubic Feet or Cubic Meters. Select one of the available packs according to the area. Place the **FUMISURE®** in zig zag manner in the area of fumigation for effective fumigation. The area of fumigation must be air tight to avoid the escaping of fumes. Remove the adhesive label on **FUMISURE®** tin & light the candle. Cover your mouth & nose with proper safety equipment during the process and before entering the room after completion of the process. Open the doors and windows to remove residual formal vapors and place the birds after 6 – 8 hrs. in chicken houses.

Fumigation is limited to "empty" poultry houses, egg storage rooms, hatching rooms, egg/chicken carrying vehicles, laboratories, go-downs, warehouses, processing plants and any closed places as per below specifications for 12 – 24 hrs. All these mentioned areas must be free of human beings, animals, birds, soils, debris, etc. Poultry houses must be securely locked during fumigation until fumigation is complete and the house is safe for re-entry. No persons other than properly trained and equipped handlers are permitted to enter the room.

PS: Egg storage rooms (in presence of eggs) can be fumigated for a maximum of 45 minutes.

Shelf Life 36 Months
Packing 10 gm, 25 gm & 50 gm Tin

Area of Application

FUMISURE® 1X	Up to 50 Cubic Meters
FUMISURE® 2.5X	Up to 125 Cubic Meters
FUMISURE® 5X	250-500 Cubic Meters

Storage & Safe Handling

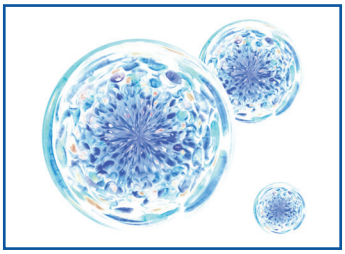

- Keep it away from sunlight & hot places.
- Do not puncture the container before use.
- Do not mix with other products.
- Crush the tin after use.

Precautions

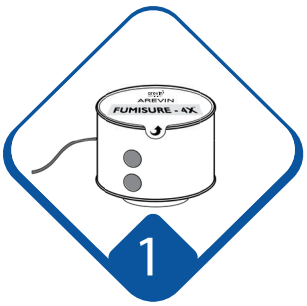

- Wear protective clothing, gloves & face mask while lighting **FUMISURE®**.
- Wash immediately with water after accidental skin or eye contamination with powder.
- Avoid inhalation of the powder.
- Prevent contamination of food, food utensils, drinking water, rivers, dams etc.
- Wash hands thoroughly after use.

For More Information

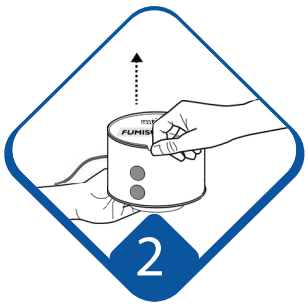

Please contact your local AREVIN representative or send query to **info@arevin.com**.

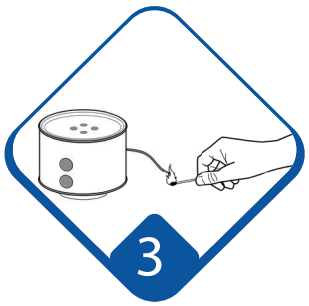

Place the tins on wax pool as a base in zig zag manner to cover the total area.

Open the sticker/ label from the top of the tin.

Light the candle (flame will take 3-5 mins. to reach the centre of the wax pool)

Leave the area comfortably and close ventilation completely.
